Redding Reloading Continues to Increase Capacity

Cortland, NY..... Redding Reloading Equipment, American maker of premium reloading gear for the metallic cartridge handloader, continues its response to the growing reloading market by adding new machinery and additional employees.

In the fourth quarter, 2009 the company took delivery of two additional, American Made, Hardinge CNC machining centers. These machines like the seven other new American Made CNC machines delivered and put online over the past 15 months have been added to better serve the demands of the reloading market and support Redding's valued customers.

"This is not the end" said company President Richard Beebe. "We still plan to add more capacity to our vertical CNC section to better meet the demand for our presses and powder measures." The market's continuing demands have given the company the ability to hire a number of new employees which is a great benefit to the local region's economy where losses in traditional skilled manufacturing jobs have hit hard.

Redding has plans for a new and larger facility, which are dependent of final approvals for a new regional industrial park but the company continues to maximize the space available in the current facility until that time. The plan is to begin building a 35,000 to 40,000 square foot facility in a newly established Cortlandville, NY area industrial park once all regulatory hurdles have been cleared for the park's final development.

Redding offers numerous unique solutions to improve the accuracy, consistency and reliability of your handloaded ammunition. For more information and a current color catalog contact: Redding Reloading Equipment 1089 Starr Road Cortland, NY 13045, or visit us on the web at: www.redding-reloading.com.
