**Redding Reloading Equipment Introduces
Imperial Screw Thread Wax**

Cortland, NY..... For years Imperial Sizing Die Wax from Redding Reloading has been an industry leader for use in both cartridge case resizing and wildcat case forming. As a high-pressure lubricant which “stays in place” during the most difficult of processes, a wax style of lubricant offers unique properties afforded to no other types of lubricating products.

Using a proprietary formulation originally developed as a "Stay-Put" wax lubricant for use in our manufacturing process, Redding now has made this Imperial product commercially available. Unlike grease or oils, wax lubricants stay in place sealing out moisture and other contaminants to better prevent corrosion. The uses for a lubricant like this are boundless. On the reloading bench there are many uses, it works on die threads, internal and external, as a ram lubricant or on any shaft or linkage where high lubricity and low transitory properties are important to keep the work area clean.

There are numerous uses in general firearms maintenance; it makes a perfect choke tube thread lube and seal, provides excellent wear resistance in the joint pins of break action guns. It can lubricate bolt ways and slide rails as well as act as a rust preventative for storage when pulled through a bore on a mop. The key is Imperial Screw Thread Wax stays where it is needed

Gunsmithing uses are well covered. It makes an excellent lubricant for butt plate or recoil pad screws entering the stock, be it wood or synthetic, easing the action while protecting the threads from rust and subsequent problems with disassembly. It acts as a high quality anti-seize on many screws in applications where high temperature is not an issue.

Redding Reloading Equipment has focused on building the finest quality, American Made products for the precision handloading market since 1946.
